DETAILED ACTION

Allowable Subject Matter

Claims 1-2,4-6,8-23 allowed.

The following is an examiner's statement of reasons for allowance: Prior art shows a motor case, a rotatable shaft that is rotatably supported by the motor case and is rotated upon actuation of the motor. Prior art also show a worm shaft that is substantially coaxial with the rotatable shaft and is rotatably supported by the motor case; coupling member and a rotational sensor.

In regards to independent claims #1 and #22, prior art fails to show a coupling member including a driving-side rotator and a driven- side rotator that is drivingly engageable with the driving-side rotator wherein; the drive-side rotator being connected to the rotatable shaft to rotate integrally with the shaft and the coupling member transmits rotation of a rotatable shaft to a worm shaft to prevent transmission of rotation of a worm shaft to a rotatable shaft. In regards to independent claims #2 and #23, prior art fails to show a coupling member that permits a misalignment between a rotational axis of a rotatable shaft and a rotational axis of a worm shaft. In regards independent claim #18, prior art fails to show a sensing element opposes a sensor magnet and that the sensor magnet is arranged to cover a space that is defined in a coupling member and that is communicated with an interior of a coupling member. In regards to independent claim #19, prior art fails to show a sensing element that is secured to a second axial side of a brush holder, which is opposite to a first axial side of a brush holder in such a manner that the sensing element opposes a sensor magnet.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
